Evolution of security concepts ... The dynamics of violent conflict are changing across the globe. The number of violent conflicts is decreasing, yet the level of social violence is greater than ever. Levels of violence are now ... challenges can no longer be met with separate, sectoral interventions.

This volume explores the repercussions of a changing world order on regional security in Latin America. It examines how global and regional power shifts impact on the evolution of regional institutions as well as on state policies adopted in response to regional security challenges such as border conflicts, political instability, migration, drug-trafficking, organized crime, and terrorism. Contributions to this volume analyze the topic from three angles: power dynamics and its effects on regional security governance; the contribution of regional institutions to the management of security challenges; and the impact of power dynamics on states ' shifting security priorities. Written by specialists from Brazil, Argentina, Colombia, Mexico, the United States and Europe, the chapters weave theory and case studies to provide a rich description of the impact of power and politics on regional security in Latin America. This book is an invaluable resource for students, scholars and practitioners interested in Latin American politics, regional cooperation, and war and conflict studies, as well as international security and international relations in general.

This Reader provides a structurally coherent explanation and review of the magnified role conception and organizational task expansion for the Nigerian military establishment in foreign policy. It argues essentially that one of the most problematic and intractable areas of public policy in Nigeria since the Civil War concerns the development of a professional defence establishment adequate to meet the challenges arising from the altered parameters of iour security environment. The correction of this condition is the primary motivation of the Armed Forces modernization and augmentation program that touches upon all elements of Nigeria's military power. This Reader is at once a review and a critique of the major facets of this modernization and augmentation process of the Nigerian armed forces within the operative context of the changing dimension of threat perception and the strategic parameters that have guided Nigerian military planning since the Civil War in 1970.

Analyzes the history, evolution, and processes of national security policies This text examines national security from two fundamental fault lines-the end of the Cold War and the 9/11 terrorist attacks-and considers how the resulting era of globalization and geopolitics guides policy. Placing this trend in conceptual and historical context and following it through military, semi-military, and non-military concerns, National Security for a New Era treats its subject as a nuanced and subtle phenomenon that encompasses everything from the nation to the individual.

Each era brings with it new techniques and methods of waging a war. While military scholars and experts have mastered land, sea, air and space warfare, time has come that they studied the art of cyberwar too. Our neighbours have acquired the capabilities to undertake this new form of asymmetric form of warfare. India too therefore needs to acquire the capabilities to counter their threat. Cyber space seems to have invaded every aspect of our life. More and more systems whether public or private are getting automated and networked. This high dependence of our critical infrastructure on Information and Communication Technology exposes it to the vulnerabilities of cyberspace. Enemy now can target such infrastructure through the cyberspace and degrade/ destroy them. This implies that the critical information infrastructure of the country and military networks today are both equally vulnerable to enemy ' s cyberattacks. India therefore must protect its critical information infrastructure as she would protect the military infrastructure in the battlefield. Public – Private Partnership model is the only model which would succeed in doing so. While the Government needs to lay down the policies and frame the right laws, private sector needs to invest into cyber security. Organisations at national level and at the level of armed forces need to be raised which can protect our assets and are also capable of undertaking offensive cyber operations. This book is an attempt to understand various nuances of cyber warfare and how it affects our national security. Based on the cyber threat environment, the books recommends a framework of cyber doctrine and cyber strategies as well as organisational structure of various organisations which a nation needs to invest in.

This collection of papers examines a variety of areas and issues related to, or raised by, the EU Internal Security Strategy. It covers such matters as critical infrastructure protection and environmental crime, from a range of disciplinary perspectives, including law, geography and politics. The EU Internal Security Strategy is becoming increasingly complex as it develops over time, as it has to operate against the background of growing diversity in law enforcement systems across EU member states. It is clear that the EU Internal Security Strategy is, and will continue to be for a long time, a work in progress, not only in its aim to address traditional transnational security threats, but also in reacting to emerging concerns, either in new crime areas or issues arising from the implementation of earlier phases of the strategy. This will be a subject matter for many academic discipline areas for some time to come.

In an interrelated and increasingly complex, dynamic and globalised security environment, New Zealand faces a range of complex and multifaceted non-traditional threats. They range from trade insecurity to terrorism and transnational crime, disputes over the control and exploitation of resources, and tensions linked to ideological, cultural and religious differences. The volume's contributors include local and international academics alongside experts who have extensive New Zealand security-sector expertise in defence, diplomacy, national security coordination, intelligence, policing, trade security and bordermanagement.New Zealand National Security: Challenges, Trends and Issues situates New Zealand within its broader political and regional security context and the various great and minor power tensions occurring within the Asia Pacific and South Pacific regions. It looks at how to protect New Zealand's border and the zones where its interests meet the world; it examines alternative ways of thinking and doing New Zealand's national security; and it looks at looming national security questions. It aims to provide New Zealanders with a critical awareness of the various salient security trends, challenges and opportunities to initiate a & ' whole of society' discussion of security.

Unlike other analyses which aim to explain the notion of national security in Mexico and at the same time address the security challenges facing the country, this short text describes the distinction between national, internal and public security in Mexico. It is the first book to provide detailed analysis on Mexico ' s security policy and its long-term consequences. Former Mexican government official Augustin Maciel-Padilla contends that the absence of a clear understanding of the complexities and sophistication of the concept of security has the potential to aggravate security conditions in Mexico. Achieving a proper understanding allows for a better guidance in confronting the grave insecurity facing the country, and for addressing other issues such as human rights, democracy and the country ' s international exposure. Maciel-Padilla reasons that Mexico is required to formulate a comprehensive, long-term, security strategy, and with this book he proposes a contribution towards that long-term goal. Understanding Mexico ' s Security Conundrum will be essential for scholars, students, and policy makers.

Security Dynamics in the Former Soviet Bloc focuses on four former Soviet sub-regions (the Baltic Sea region, the Slavic republics, the Black Sea region, and Central Asia) to explore the degree to which 'democratic security', which includes de-politicisation of, and civilian oversight of, the military, resolution of conflicts by international cooperation, and involvement in international organisations. It examines how far states in these regions have developed cooperative foreign and security policies towards their immediate neighbours and key Western states and organisations, explores the interplay between internal and external aspects of democratic security building, and uses case-study examples to show how inter-state bi-lateral and multi-lateral relations are developing.
