This histology atlas was essential for me passing anatomy lab. The pictures were great, and I loved how they would show multiple pictures of certain slides. Some slides looked completely different based on the magnification. I never missed histology questions on my lab exams.

Includes bibliographical references and index.

A Photographic Atlas of Histology, 2e by Michael J. Leboffe is designed for use in undergraduate histology and human anatomy courses. It serves as a convenient visual reference and is of particular value to students in a laboratory setting. Commercially available microscope slides are used to photograph, so images represent the quality and diversity of what a student is actually likely to encounter in the laboratory; pathological specimens have not been used.

This full-colour atlas is designed for all students taking either separate or integrated courses in physiology and/or anatomy. The atlas can accompany or augment any human anatomy, human physiology or combined textbook, and should be of particular use in a laboratory situation, where it can stand alone as a laboratory manual.

This unique atlas includes over 475 full color photomicrographs while providing students with a readily accessible source of morphologic information for use in the identification of tissues and organs. Each photomicrograph is accompanied by explanatory

captions that guide students to the key morphologic features that identify the function of the structures. The self-assessment section at the end of the book serves as a review tool for those structures that students traditionally have difficulty in identifying.

Designed for undergraduate courses emphasizing human anatomy and using the cat for dissection, this popular manual (organized by system) offers exercises that highlight the differences and similarities between feline and human anatomy.

This Color Atlas of Anatomy features full-color photographs of actual cadaver dissections, with accompanying schematic drawings and diagnostic images. The photographs depict anatomic structures with a realism unmatched by illustrations in traditional atlases and show students specimens as they will appear in the dissection lab. Chapters are organized by region in order of standard dissection, with structures presented both in a systemic manner, from deep to surface, and in a regional manner. This edition has additional clinical imaging, including MRIs, CTs, and endoscopic techniques. New graphics include clinically relevant nerve and vessel varieties and antagonistic muscle functions. Many older images

have been replaced with new, high-resolution images. Black-and-white dissection photographs have been replaced with color photography. A companion website will include an Image Bank, interactive software (similar to an Interactive Atlas), and full text online.

anatomical models from leading manufacturers such as 3B Scientific®, SOMSO®, and Denoyer-Geppert Science Company. The Atlas is composed of 13 chapters, organized by body system, and includes a final chapter with cat dissection photos. In each chapter, students will first explore gross anatomy, as seen on cadavers and anatomical models, and then conclude with relevant histological images.

This photo atlas is ideal for anyone interested in human anatomy and physiology. Its stunning array of high quality imagery is enhanced by a solid scientific presentation of the principles of the human structure and function. Body systems, orientation, surface
