Africa, the cradle of mankind, is home to many cultures across its varied geographic regions that practice a wealth of spiritual and religious belief systems. The indigenous belief systems have altered, and many traditions have been lost or replaced by the secular and religious traditions of immigrants and colonisers. Islam has had a strong influence in northern Africa since the 7th Century as has Christianity in especially Sub- Saharan Africa since the 17th Century.

Indigenous knowledge as a key to sustainable development

Recentring African Indigenous Knowledge and Belief Systems edited by Artwell Nhemachena , Nokuthula Hlabangane , Joseph Z. Z. Matowanyika

Positing the notions of coloniality of ignorance and geopolitics of ignorance as central to coloniality and colonisation, this book examines how colonialists socially produced ignorance among colonised indigenous peoples so as to render them docile and manageable.

The debate on the existence of African philosophy has taken central stage in academic circles, and academics and

Access Free African Belief And Knowledge Systems Project Muse

researchers have tussled with various aspects of this subject. This book notes that the debate on the existence of African philosophy is no longer necessary. Instead, it urges scholars to demonstrate the different philosophical genres embedded in African philosophy. As such, the book explores African metaphysical epistemology with the hope to redirect the debate on African philosophy. It articulates and systematizes metaphysical and epistemological issues in general and in particular on Africa. The book aptly shows how these issues intersect with the philosophy of life, traditional beliefs, knowledge systems and practices of ordinary Africans and the challenges they raise for scholarship in and on philosophy with relevance to Africa.

Access Free African Belief And Knowledge Systems Project Muse

The book connects the logic and histories of religion, ideology and indigenous beliefs to understand knowledge systems in Africa.

Health care in sub-Saharan Africa is and will continue to be an issue of utmost importance in the twenty-first century. As the HIV/AIDS pandemic ravages the continent, the stakes heighten not only to provide effective and efficient health care to African communities, but also to disseminate knowledge about health-seeking behavior and to instill belief among people in the possibility of leading a healthy existence. *Health Knowledge and Belief Systems in Africa* raises questions and offers analysis on many issues related to how health and illness are understood by communities in Africa, as well as

Access Free African Belief And Knowledge Systems Project Muse

how health knowledge and beliefs are disseminated and utilized to provide health services to African populations. The chapters in this book derive from many different disciplinary approaches and cover regions across sub-Saharan Africa, thus offering a holistic glimpse at the knowledge and belief systems functioning in Africa and the ways that these systems contribute to health care access and delivery in the world's most endangered continent.

This is a comprehensive study and erudite description of the struggle of African Indigenous Knowledge Systems in an Age of Globalization, using in particular eighty-four children's traditional games in south-eastern Zimbabwe. The book is an informative and interesting anthropological account of rare

Access Free African Belief And Knowledge Systems Project Muse

African children's games at the risk of disappearing under globalization. The virtue of the book does not only lie in its modest philosophical questioning of those knowledge forms that consider themselves as superior to others, but in its laudable, healthy appreciation of the creative art forms of traditional literature that features in genres such as endangered children's traditional games. The book is a clarion call to Africans and the world beyond to come to the rescue of relegated and marginalized African creativity in the interest of future generations.

This collection derives from a conference held in Pretoria, South Africa, and discusses issues of indigenous knowledge systems (IKS) and the arts. It presents ideas about how to

Access Free African Belief And Knowledge Systems Project Muse

promote a deeper understanding of IKS within the arts, the development of IKS-arts research methodologies, and the protection and promotion of IKS in the arts. Knowledge, embedded in song, dance, folklore, design, architecture, theatre, and attire, and the visual arts can promote innovation and entrepreneurship, and it can improve communication. IKS, however, exists in a post-millennium, modernizing Africa. It is then the concept of post-Africanism that would induce one to think along the lines of a globalized, cosmopolitan and essentially modernized Africa. The book captures leading trends and ideas that could help to protect, promote, develop and affirm indigenous knowledge and systems, whilst also making room for ideas that do not necessarily oppose IKS, but encourage the modernization (not Westernization) of

Access Free African Belief And Knowledge Systems Project Muse

Africa.

This book explores the role of the social and natural sciences in supporting the development of indigenous knowledge systems. It looks at how indigenous knowledge systems can impact on the transformation of knowledge generating institutions such as scientific and higher education institutions on the one hand, and the policy domain on the other.

Positing the notions of coloniality of ignorance and geopolitics of ignorance as central to coloniality and colonisation, this book examines how colonialists socially produced ignorance among colonised indigenous peoples so as to render them docile and manageable. Dismissing colonial descriptions of

Access Free African Belief And Knowledge Systems Project Muse

indigenous people as savages, illiterate, irrational, prelogical, mystical, primitive, barbaric and backward, the book argues that imperialists/colonialists contrived geopolitics of ignorance wherein indigenous regions were forced to become ignorant, hence containable and manageable in the imperial world. Questioning the provenance of modernist epistemologies, the book asks why Eurocentric scholars only contest the provenance of indigenous knowledges, artefacts and scientific collections. Interrogating why empire sponsors the decolonisation of universities/epistemologies in indigenous territories while resisting the repatriation/restitution of indigenous artefacts, the book also wonders why Westerners who still retain indigenous artefacts, skulls and skeletons in their museums, universities and private collections do not

Access Free African Belief And Knowledge Systems Project Muse

consider such artefacts and skulls to be colonising them as well. The book is valuable to scholars and activists in the fields of anthropology, museums and heritage studies, science and technology studies, decoloniality, policymaking, education, politics, sociology and development studies.

This is the only analysis of indigenous discourse about an African belief system undertaken within the framework of Anglo-American analytical philosophy.

There has been a growth in the use, acceptance, and popularity of indigenous knowledge. High rates of poverty and a widening economic divide is threatening the accessibility to western scientific knowledge in the developing world where

Access Free African Belief And Knowledge Systems Project Muse

many indigenous people live. Consequently, indigenous knowledge has become a potential source for sustainable development in the developing world. The Handbook of Research on Theoretical Perspectives on Indigenous Knowledge Systems in Developing Countries presents interdisciplinary research on knowledge management, sharing, and transfer among indigenous communities. Providing a unique perspective on alternative knowledge systems, this publication is a critical resource for sociologists, anthropologists, researchers, and graduate-level students in a variety of fields.
