Scott Foresman Science (Diamond Edition) ((c)2008) components for Grade 5.

Scott Foresman Science (Diamond Edition) ((c)2010) components for Grade 2.

Spend less time planning for science and more time actually doing science. This program provides inquiry-rich content with Scaffolded Inquiry(TM) activities; cross-curricular connections that link reading and science skills in every chapter; hundreds of Leveled Readers for differentiated instruction; and time-saving strategies that create extra time in your day to do science. Hardbound Student Edition is organized into four units: Life, Earth, Physical, and Space and Technology. Each unit contains a balance between key science content and hands-on activities that support each lesson.

Scott Foresman Science (Diamond Edition) ((c)2008) components for Grade 3.

Set of materials for classroom use in Grade 2 science curriculum.

A comprehensive guide to carbon inside Earth - its quantities, movements, forms, origins, changes over time and impact on planetary processes. This title is also available as Open Access on Cambridge Core.

Though largely inaccessible, the geochemistry of Earth's mantle and core can be examined through a wide variety of approaches. Volume 2 focuses first on "remote" sensing using evidence from cosmochemical, seismic, petrologic and geochemical approaches. Mantle composition is then examined in detail through descriptions of mantle samples brought to Earth's surface through tectonic, volcanic, and volatile-outgassing processes. The volume concludes with examination of processes that modify the composition of the mantle and core including an early magma ocean, partial melting, element partitioning between minerals and melts, and physical mixing caused by plate subduction, mantle convection and mass exchange between mantle and core. Reprinted individual volume from the acclaimed Treatise on Geochemistry, (10 Volume Set, ISBN 0-08-043751-6, published in 2003) Comprehensive and authoritative scope and focus Reviews from renowned scientists across a range of subjects, providing both overviews and new data, supplemented by extensive bibliographies Extensive illustrations and examples from the field

From the author of *Guns, Germs and Steel*, Jared Diamond's *Collapse: How Societies Choose to Fail or Survive* is a visionary study of the mysterious downfall of past civilizations. Now in a revised edition with a new afterword, Jared Diamond's *Collapse* uncovers the secret behind why some societies flourish, while others founder - and what this means for our future. What happened to the people who made the forlorn long-abandoned statues of Easter Island? What happened to the architects of the crumbling Maya pyramids? Will we go the same way, our skyscrapers one day standing derelict and overgrown like the temples at Angkor Wat? Bringing together new evidence from a startling range of sources and piecing together the myriad influences, from climate to culture, that make societies self-destruct, Jared Diamond's *Collapse* also shows how - unlike our ancestors - we can benefit from our knowledge of the past and learn to be survivors. 'A grand sweep from a master storyteller of the human race' - Daily Mail 'Riveting, superb, terrifying' - Observer 'Gripping ... the book fulfils its huge ambition, and Diamond is the only man who could have written it' - Economist 'This book shines like all Diamond's work' - Sunday Times
