The F-104 Starfighter was one of the most successful and prolific jet fighters of the late '50s and early '60s - and one of the most beautiful. It was the first production Mach 2 aircraft, and it rewrote the performance books for speed, altitude and time to climb. Aircraft enthusiasts called it "the missile with a man in it." After its initial flight in 1954, the F-104 program produced more than 2,500 aircraft, making it one of the largest military aircraft programs ever. F-104s flew for the US and many NATO allies, and were eventually produced under license in Canada, Japan, and several European countries. In fact, Italy is still flying updated F-104s in 2003. This book covers this revolutionary aircraft's design and development, its weapons and other systems, and all 18 models of the F-104, complete with photos of each variant. NASA-modified research craft are also discussed, along with several formerly classified programs based on the F-104. Author Jim Upton was one of the F-104 program's flight test engineers, so he knows the aircraft and the people involved. Includes a foreword by Dick Heppe, retired president of Lockheed California, and chief aerodynamicist of the F-104.

Updated to reflect recent industry developments, this edition features practical information on Rockwell Automation's SLC 500 family of PLCs and includes a no-nonsense introduction to RSLogix software and the new ControlLogix PLC. To assist readers in understanding key concepts, the art program has been modernized to include improved illustrations, current manufacturer-specific photos, and actual RSLogix software screens to visibly illustrate essential principles of PLC operation. New material has been added on ControlNet and DeviceNet, and a new chapter on program flow instructions includes updated references to the SLC 500, MicroLogix, and the PLC 5. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Embrace and revel in the stories of the toughest cyclists of all time, told by The Velominati, originators of The Rules. Read and get ready to ride . . . In cycling, suffering brings glory: a rider's value can be judged by their results, but also by their panache and heroism. Prepared to be awed and inspired by Chris Froome riding on at the Tour de France with a broken wrist or Geraint Thomas finishing it with a broken pelvis. In The Hardmen the writers behind cycling superblog Velominati.com and The Rules will tell the stories and illuminate the myths of not just the greatest cyclists ever, but the toughest. From Eddy Merckx to Beryl Burton, and from Marianne Vos to Edwig Van Hooydonk, the book will lay bare the secrets of their extraordinary and inspirational endurance in the face of pain, danger and disaster. After all, suffering is one of the joys of being a cyclist. Embrace climbs, relish the descents, and get ready to harden up. . .

Understand Electronics provides a readable introduction to the exciting world of electronics for the student or enthusiast with little previous knowledge. The subject is treated with the minimum of mathematics and the book is extensively illustrated. This is an essential guide for the newcomer to electronics, and replaces the author's best-selling Beginner's Guide to Electronics. The step-by-step approach makes this book ideal for introductory courses such as the Intermediate GNVQ.

Revenge is a great word to say. Repeat it slowly: Revenge... Just saying it makes you feel better. Let your imagination run riot with these little revenge tricks... all 101 of them.

Provides an introduction to the GNU C and C++ compilers, gcc and g++. This manual includes: compiling C and C++ programs using header files and libraries, warning options, use of the preprocessor, static and dynamic linking, optimization, platform-specific options, profiling and coverage testing, paths and environment variables, and more.
