A Core Study Text for the CTA Qualification

Remote sensing data and methods are increasingly being implemented in assessments of volcanic processes and risk. This happens thanks to their capability to provide a spectrum of observation and measurement opportunities to accurately sense the dynamics, magnitude, frequency, and impacts of volcanic activity. This book includes research papers on the use of satellite, aerial, and ground-based remote sensing to detect thermal features and anomalies, investigate lava and pyroclastic flows, predict the flow path of lahars, measure gas emissions and plumes, and estimate ground deformation. The multi-disciplinary character of the approaches employed for volcano monitoring and the combination of a variety of sensor types, platforms, and methods that come out from the papers testify to the current scientific and technology trends toward multi-data and multi-sensor monitoring solutions. The added value of the papers lies in the demonstration of how remote sensing can improve our knowledge of volcanoes that pose a threat to local communities; back-analysis and critical revision of recent volcanic eruptions and unrest periods; and improvement of modeling and prediction methods. Therefore, the selected case studies also demonstrate the societal impact that this scientific discipline can potentially have on volcanic hazard and risk management.

In this present era of competition, every competitive examination consists of 5 sections Quantitative Aptitude,Reasoning, General English, Computer Science and General Awareness related to banking industry. After teaching more than 18,000 students in 28 years, we have seen a lot of students spending their time practicing aptitude and reasoning alone. But the students who cleared the exam would definitely say the above method of practicing would not help because merely passing in Aptitude and Reasoning sections will not help. Students should also think about the other sections and overall cut off. We know a lot of students who cleared all the sections but failed to clear the overall cut off. In fact, Practicing GK and English is the only way to raise the overall cut-off. So, we have decided to dedicate this entire magazine just for General Awareness & Banking awareness. We sincerely believe that students who practice the next 100 pages would secure 40 marks from the Banking awareness section. We thank Google Play for publishing our e-magazine on their mobile platform. We also thank our students who assisted to bring this magazine out.

The G20 needs to be bold and pragmatic if it is to deal effectively with the global economy’s big issues. Since its establishment in 1999, the G20 has become a key international forum. But it suffers from inherent design flaws and remains a work in progress. When Australia began its presidency of the 2014 summit in Brisbane, many commentators suggested that Australia’s chairing of the G20 would reinvigorate it. This timely book looks at what was achieved at the Brisbane Summit and what has happened in its wake. Crucially, it explores what role the G20 could and should play in dealing with such pressing global issues as international taxation, trade, energy and climate change. Expert contributors, many of them former inside players, assess the impact of the summit in the context of the year’s broader geopolitical challenges, including Russia’s temporary expulsion from the G8 and the failure of the US to ratify its governance reforms to the IMF. Taking stock, contributors question the effectiveness of the G20, and identify the reforms that are needed if it is to offer strong leadership in an integrated global economy. Together they ask, what is the future of the G20 and other ‘Gs’?

The examining team reviewed F6 Study Text covers all the relevant ACCA F6 syllabus topics. Computations are the most important part of this paper so there are plenty of detailed, worked examples throughout the text to help build your understanding and reinforce learning.

Autophagy (also known as macroautophagy) is an evolutionarily conserved process by which cytoplasmic components are nonselectively enclosed within a double-membrane vesicle known as the autophagosome and delivered to the vacuole for degradation of toxic components and recycling of needed nutrients. This catabolic process is required for the adequate adaptation and response of the cell, and correspondingly the whole organism, to different types of stress including nutrient starvation or oxidative damage. Autophagy has been extensively investigated in yeasts and mammals but the identification of autophagy-related (ATG) genes in plant and algal genomes together with the characterization of autophagy-deficient mutants in plants have revealed that this process is structurally and functionally conserved in photosynthetic eukaryotes. Recent studies have demonstrated that autophagy is active at a basal level under normal growth in plants and is upregulated during senescence and in response to nutrient limitation, oxidative stress, salt and drought conditions and pathogen attack. Autophagy was initially considered as a non-selective pathway, but numerous observations mainly obtained in yeasts revealed that autophagy can also selectively eliminate specific proteins, protein complexes and organelles. Interestingly, several types of selective autophagy appear to be also conserved in plants, and the degradation of protein aggregates through specific adaptors or the delivery of chloroplast material to the vacuole via autophagy has been reported. This research topic aims to gather recent progress on different aspects of autophagy in plants and algae. We welcome all types of articles including original research, methods, opinions and reviews that provide new insights about the autophagy process and its regulation.

This chapter discusses various past and future aspects of the global economy. There has been a huge transformation of the global economy in the last several years. Articles on the future of energy in the global economy by Jeffrey Ball and on measuring inequality by Jonathan Ostry and Andrew Berg are also illustrated. Since the 2008 global crisis, global economists must change the way they look at the world.

The thoroughly Revised & Updated 10th Mega edition of the book 'Comprehensive Guide to BITSAT Online Test 2019 with Past 2014-2018 Solved Papers & 90 Mock Online Tests' covers the 100% syllabus in Physics, Chemistry, Maths, English Proficiency and Logical Reasoning as provided in the latest BITSAT brochure and asked in past BITSAT papers. This new edition provides (i) Chapter-wise MINDMAPS to revise the chapter quickly (ii) Chapter-wise Tips & Techniques to Master Problem Solving. (iii) Fully Solved 2014-2018 Question Papers added chapter-wise (iv) 3 Level of Exercises - Warm Up, Accelerator & Online Assessment (v) 5 Full Syllabus Online Tests, designed as per the latest BITSAT exam pattern, provided online through Access Codes provided in the book.

NMIMS Programs After Twelfth (NPAT) is a national level entrance exam conducted by SVKM’s Narsee Monjee Institute of Management Studies (NMIMS) for admission to BBA, BTech, BSc, BCom(Hons), MBA (Tech), BDes and other Integrated course. The different programs are offered by the various schools of NMIMS (9 Campuses) at Mumbai, Shirpur, Bengaluru, Hyderabad, Navi Mumbai, Indore and Dhule. The Mumbai campus offers all the programmes, Shirpur campus offers BTech, MBA (Tech) and Bengaluru campus offers BBA, BSc Finance and BSc Economics. Indore and Navi Mumbai campuses offer only BBA. NMIMS is a great college for BBA, with excellent faculty and teaching standards, as well as a wonderful student network.

How to sustain our world for future generations has perplexed us for centuries. We have reached a crossroads: we may choose the rocky path of responsibility or continue on the paved road of excess that promises hardship for our progeny. Independent efforts to resolve isolated issues are inadequate. Different from these efforts and from other books on the topic, this book uses systems thinking to understand the dominant forces that are shaping our hope for sustainability. It first describes a mental model - the bubble that holds our beliefs - that emerges from preponderant world views and explains current global trends. The model emphasizes economic growth and drives behavior toward short-term and self-motivated outcomes that thwart sustainability. The book then weaves statistical trends into a system diagram and shows how the economic, environmental, and societal contributors of sustainability interact. From this holistic perspective, it finds leverage points where actions can be most effective and combines eight areas of intervention into an integrated plan. By emphasizing both individual and collective actions, it addresses the conundrum of how to blend human nature with sustainability. Finally, it identifies primary three lessons we can learn by applying systems thinking to sustainability. Its metaphor-rich and accessible style makes the complex topic approachable and allows the reader to appreciate the intricate balance required to sustain life on Earth. Highlights the application of system thinking in economics Identifies systemic leveraging actions for achieving sustainability Outlines a comprehensive and integrated plan for achieving sustainable stewardship in the future
