This timely collection offers a fresh look on the impact of gender perspectives in the discipline of political science at the beginning of the 21st century. Jane Bayes combats the Eurocentric focus that has characterised both fields and suggests viable alternatives for the future of the disciplines.

Artificial intelligence (AI) is the latest technological evolution which is transforming the global economy and is a major part of the "Fourth Industrial Revolution." This book covers the meaning, types, subfields and applications of AI, including U.S. governmental policies and regulations, ethical and privacy issues, particularly as they pertain and affect facial recognition programs and the Internet-of Things (IoT). There is a lengthy analysis of bias, AI's effect on the current and future job market, and how AI precipitated fake news. In addition, the text covers basics of intellectual property rights and how AI will transform their protection. The author then moves on to explore international initiatives from the European Union, China's New Generation Development Plan, other regional areas, and international conventions. The book concludes with a discussion of super intelligence and the question and applicability of consciousness in machines. The interdisciplinary scope of the text will appeal to any scholars, students and general readers interested in the effects of AI on our society, particularly in the fields of STS, economics, law and politics.

A chatbot is expected to be capable of supporting a cohesive and coherent conversation and be knowledgeable, which makes it one of the most complex intelligent systems being designed nowadays. Designers have to learn to combine intuitive, explainable language understanding and reasoning approaches with high-performance statistical and deep learning technologies. Today, there are two popular paradigms for chatbot construction: 1. Build a bot platform with universal NLP and ML capabilities so that a bot developer for a particular enterprise, not being an expert, can populate it with training data; 2. Accumulate a huge set of training dialogue data, feed it to a deep learning network and expect the trained chatbot to automatically learn "how to chat". Although these two approaches are reported to imitate some intelligent dialogues, both of them are unsuitable for enterprise chatbots, being unreliable and too brittle. The latter approach is based on a belief that some learning miracle will happen and a chatbot will start functioning without a thorough feature and domain engineering by an expert and interpretable dialogue management algorithms. Enterprise high-performance chatbots with extensive domain knowledge require a mix of statistical, inductive, deep machine learning and learning from the web, syntactic, semantic and discourse NLP, ontology-based reasoning and a state machine to control a dialogue. This book will provide a comprehensive source of algorithms and architectures for building chatbots for various domains based on the recent trends in computational linguistics and machine learning. The foci of this book are applications of discourse analysis in text relevant assessment, dialogue management and content generation, which help to overcome the limitations of platform-based and data driven-based approaches. Supplementary material and code is available at <https://github.com/bgalitsky/relevance-based-on-parse-trees>

Since the end of the Cold War, religion has become an ever more explicit and systematic focus of US foreign policy across multiple domains. US foreign policymakers, for instance, have been increasingly tasked with monitoring religious freedom and promoting it globally, delivering humanitarian and development aid abroad by drawing on faith-based organizations, fighting global terrorism by seeking to reform Muslim societies and Islamic theologies, and advancing American interests and values more broadly worldwide by engaging with religious actors and dynamics. Simply put, religion has become a major subject and object of American foreign policy in ways that were unimaginable just a few decades ago. In *Finding Faith in Foreign Policy*, Gregorio Bettiza explains the causes and consequences of this shift by developing an original theoretical framework and drawing upon extensive empirical research and interviews. He argues that American foreign policy and religious forces have become ever more inextricably entangled in an age witnessing a global resurgence of religion and the emergence of a postsecular world society. He further shows how the boundaries between faith and state have been redefined through processes of desecularization in the context of American foreign policy, leading the most powerful state in the international system to intervene and reshape in increasingly sustained ways sacred and secular landscapes around the globe. Drawing from a rich evidentiary base spanning twenty-five years, *Finding Faith in Foreign Policy* details how a wave of religious enthusiasm has transformed not just American foreign policy, but the entire international system.

Philosophers have long agreed that moral responsibility might not only have a freedom condition, but also an epistemic condition. Moral responsibility and knowledge interact, but the question is exactly how. Ignorance might constitute an excuse, but the question is exactly when. Surprisingly enough, the epistemic condition has only recently attracted the attention of scholars. This volume sets the agenda. Sixteen new essays address the following central questions: Does the epistemic condition require akrasia? Why does blameless ignorance excuse? Does moral ignorance sustained by one's culture excuse? Does the epistemic condition involve knowledge of the wrongness or wrongmaking features of one's action? Is the epistemic condition an independent condition, or is it derivative from one's quality of will or intentions? Is the epistemic condition sensitive to degrees of difficulty? Are there different kinds of moral responsibility and thus multiple epistemic conditions? Is the epistemic condition revisionary? What is the basic structure of the epistemic condition?

This book presents a broad view of the ecology and behavior of aquatic insects, raising awareness of this conspicuous and yet little known fauna that inhabits inland waterbodies such as rivers, lakes and streams, and is particularly abundant and diverse in tropical ecosystems. The chapters address topics such as distribution, dispersal, territoriality, mating behavior, parental care and the role of sensory systems in the response to external and internal cues. In the context of ecology, it discusses aquatic insects as bio indicators that may be used to assess environmental disturbances, either in protected or urban areas, and provides insights into how genetic connectivity can support the development of novel conservation strategies. It also explores how aquatic insects can inspire solutions for various problems faced by modern society, presenting examples in the fields of material science, optics, sensorics and robotics.
