The popular education and adult literacy movements in Chile have historically represented competing paths toward a literate society: one born and nurtured through bitter nineteenth-century labor struggles, the other a compensatory effort by the modern state to limit the political potential of literacy. Robert Austin's book explores the contest between the state and popular education in three paradigmatic Latin American regimes: that of Eduardo Frei Montalva (Christian Democrat, 1964-70), Salvador Allende (Socialist, 1970-73) and Augusto Pinochet (Dictator, 1973-90). Robert Austin's engaging narrative captures the relationship between the Chilean state, formal and non-formal literacy, and popular education, from the demise of liberal capitalism to the consolidation of neoliberalism. This remarkable investigation of the dynamic link between the historical process, literacy, and pedagogy celebrates popular education's victory in securing the inclusion, and subsequent empowerment, of women and ethnic minorities. The State, Literacy, and Popular Education in Chile, 1964-1990 will be of great interest to political scientists, cultural historians, and scholars of education.

Volcanic Hazards, Risks, and Disasters provides you with the latest scientific developments in volcano and volcanic research, including causality, impacts, preparedness, risk analysis, planning, response, recovery, and the economics of loss and remediation. It takes a geoscientific approach to the topic while integrating the social and economic issues related to volcanoes and volcanic hazards and disasters. Throughout the book case studies are presented of historically relevant volcanic and seismic hazards and disasters as well as recent catastrophes, such as Chile's Puyehue volcano eruption in June 2011. Puts the expertise of top volcanologists, seismologists, geologists, and geophysicists selected by a world-renowned editorial board at your fingertips Presents you with the latest research—including case studies of prominent volcanoes and volcanic hazards and disasters—on causality, economic impacts, fatality rates, and earthquake preparedness and mitigation Numerous tables, maps, diagrams, illustrations, photographs, and video captures of hazardous processes support you in grasping key concepts

Scallops are among the better known shellfish and are widely distributed throughout the world. They are of great economic importance, support both commercial fisheries and mariculture efforts and occupy a unique niche in the marine environment. Contributions from world leaders in scallop research and culture cover all facets of scallop biology including anatomy, taxonomy, physiology, ecology, larval biology and neurobiology. Chapters are also devoted to diseases and parasites, genetics, population dynamics and the adductor muscle, with extensive reference lists provided for each chapter. Since the publication of the first edition of Scallops: Biology, Ecology and Aquaculture in 1991, commercial interest in scallops has grown globally and this is reflected in the seventeen extensive chapters covering both fisheries and aquaculture for all species of scallops in all countries where they are fished or cultured. The Second Edition is the only comprehensive treatise on the biology of scallops and is the definitive reference source for advanced undergraduate and graduate students, mariculturists, managers and researchers. It is a valuable reference for anyone interested in staying abreast of the latest advances in scallops. \* Offers over 30 detailed chapters on the developments and ecology of scallops \* Provides chapters on various cultures of scallops in China, Japan, Scandinavia, Eastern North American, Europe, and Eastern North America \* Includes details of their reproduction, nervous system and behavior, genetics, disease and parasites, and much more \* Complete updated version of the first edition

This book is the result of research from over fifteen countries, asking which background and environmental factors influence achievement in mathematics and science. This research is based on data from the Third International Mathematics and Science Study (TIMSS), which was conducted under the auspices of the International Association for the Evaluation of Educational Achievement (IEA) in 1995 and 1998. In many countries researchers have started secondary analysis of the data in search for relationships between contextual factors and achievement. In these analyses two different approaches can be distinguished, which can be characterised by the metaphors of 'fishing' and 'hunting'. In the 'fishing' approach, researchers begin with an open mind, considering all possible context variables as potentially influential. Applying analysis techniques such as regression analysis, Listrel, FLS, HLM, and MLN, they then identify important factors within their countries or across a number of countries. In the 'hunting' approach, researchers hypothesise certain context variables and trace the effect of these variables on mathematics and/or science achievement.

The election of Michelle Bachelet as president of Chile in 2006 gave new impetus to the struggle in that country for legislation to improve women's rights and highlighted a process that had already been under way for some time. In Feminist Policymaking in Chile, Liesl Haas investigates the efforts of Chilean feminists to win policy reforms on a broad range of gender equity issues—from labor and marriage laws, to educational opportunities, to health and reproductive rights. Between 1990 and 2008, sixty-three bills were put forward in the Chilean legislature as a result of pressure brought by the feminist movement and its allies. Haas examines all these bills, identifying the conditions under which feminist policymaking was most likely to succeed. In doing so, she develops a predictive theory of policy success that is broadly applicable to other Latin American countries.

This review assesses Chile's public health system, highlights areas of strength and weakness, and makes a number of recommendations for improvement. The review examines Chile's public health system architecture, and how well policies are responding to significant population health challenges ...

Living Standards Measurement Study No. 113. This paper analyzes the extent to which workers in Bolivia face barriers to entry in the formal and informal sectors of the urban labor market. These barriers are most prevalent in the formal sector because of regulation. The higher wages found in the that sector are often regarded as evidence of labor market segmentation. However, wage differences between sectors may also result from compensating wage differentials, which follow from non-monetary returns to the job such as health insurance, utility associated with the workplace, and job security. The author proposes a model that allows testing for labor market segmentation between the two sectors on the basis of cross-sectional data. The methodology incorporates data on ways in which individuals search for new jobs and information about discouraged workers who have stopped searching for jobs. The proposed model accounts for all of the specific features of urban labor markets in developing countries, in particular the existence of a competitive informal sector.
