Contemporary scholarly discourses about decolonising materialities are taking two noticeable trajectories, the first trajectory privileges establishing " connections ", " relationships " and " associations " between human beings and nature. The second trajectory privileges restoration, restitution, reparations for colonial disposessions, lootings and disinheritance. While the first trajectory presupposes that colonialism was merely about " separation ", " alienation ", and " disconnections " between human beings and nature, the second trajectory stresses the colonialists' "dispossession, disinheritance and privations of Africans. Drawing on contemporary discourses about materialities in relation to semiotics, (non-)representationalism, rhetoric, ecocriticism, territorialisation, deterritorialisation and reterritorialisation, translation, animism, science and technology studies, this book teases out the intellectually rutted terrain of African materialities. It argues that in a world of increasing impoverishment, the significance of materialities cannot be overemphasised: more so for the continent of Africa where impoverishment " materialises " in the midst of resource opulence. The book is a pacesetter in no holds barred interrogation of African materialities.

Announcements for the following year included in some vols.

The book provides primary information about civil engineering to both a civil and non-civil engineering audience in areas such as construction management, estate management, and building. Basic civil engineering topics like surveying, building materials, construction technology and management, concrete technology, steel structures, soil mechanics and foundations, water resources, transportation and environment engineering are explained in detail. Codal provisions of US, UK and India are included to cater to a global audience. Insights into techniques like modern surveying equipment and technologies, sustainable construction materials, and modern construction materials are also included. Key features: • Provides a concise presentation of theory and practice for all technical in civil engineering. • Contains detailed theory with lucid illustrations. • Focuses on the management aspects of a civil engineer's job. • Addresses contemporary issues such as permitting, globalization, sustainability, and emerging technologies. • Includes codal provisions of US, UK and India. The book is aimed at professionals and senior undergraduate students in civil engineering, non-specialist civil engineering audience
