structure of DNA, the molecule of life, Francis Crick and James Watson revolutionized biochemistry and won themselves a Nobel Prize. At the time, Watson was only twenty-four, a young scientist hungry to make his mark. His uncompromisingly honest account of the heady days of their thrilling sprint against other world-class researchers to solve one of science's greatest mysteries gives a dazzlingly clear picture of a world of brilliant scientists with great gifts, very human ambitions, and bitter rivalries. With humility unspoiled by false modesty, Watson relates his and Crick's desperate efforts to beat Linus Pauling to the Holy Grail of life sciences, the identification of the basic building block of life. Never has a scientist been so truthful in capturing in words the flavor of his work.

Originally published in 1979, this is a dream book with an outstanding difference: it takes the interpretation of dreams out of the realm of the professionals and gives it to the ultimate expert – the dreamer. Working with Dreams stresses the uniqueness of every dream and dreamer. With anecdotes and examples from their own dream groups, the authors show how to deal with the intimacy and honesty of a dream; how to explore its meanings without distorting them; how to let a dream tell us about ourselves and add to our understanding. Dr Ullman and Mrs Zimmerman start with the question of what is in a dream – what is real and what is symbolic? – and then go on to explain what happens during sleep and the way a dream develops. They cover remembering and recording dreams and dealing with the imagery of dreams. They illustrate the many predicaments that dreams depict, the self-deceptions we practice in relation to our dreams, and then show how dream groups – whether a family or a group of strangers – can work together to uncover the meaning of dreams. And they enrich their book by discussing

everything from the history of dreams to the possibilities of dreams across space and time. The result is a storehouse of information about the world of dreams.

Filmmakers have often encouraged us to regard people with physical disabilities in terms of pity, awe, humor, or fear as "Others" who somehow deserve to be isolated from the rest of society. In this first history of the portrayal of physical disability in the movies, Martin Norden examines hundreds of Hollywood movies (and notable international ones), finds their place within mainstream society, and uncovers the movie industry's practices for maintaining the status quo keeping people with disabilities dependent and "in their place." Norden offers a dazzling array of physically disabled characters who embody or break out of the stereotypes that have both influenced and been symptomatic of society's fluctuating relationship with its physically disabled minority. He shows us "sweet innocents" like Tiny Tim, "obsessive avengers" like Quasimodo, variations on the disabled veteran, and many others. He observes the arrival of a new set of stereotypes tied to the growth of science and technology in the 1970s and 1980s, and underscores movies like *My Left Foot* and *The Waterdance* that display a newfound sensitivity. Norden's in-depth knowledge of disability history makes for a particularly intelligent and sensitive approach to this long-overlooked issue in media studies.

The volume is collection of articles treating the topic of human improvement/enhancement from

a variety of perspectives – philosophical, literary, medical, genetic, sociological, legal etc. The chapters in this volume treat not only those aspects that most immediately come to mind when one thinks of ‘human enhancement’, such as genetic engineering, cloning, artificial implants and artificial intelligence etc. Somewhat less obvious aspects include evolutionary perspectives in connection with the prolongation of the human lifespan, plastic surgery since its beginnings, and questions such as whether the distinction between ‘natural’ and ‘artificial’ can really be drawn at all and how it has been conceived across the ages, or what the legal implications are of recent developments and techniques. Many papers make links to the representation of these developments in popular culture, from Jules Verne through Aldous Huxley to the movie Gattaca, address the hopes and fears that come with them as well as the question how realistic these are. While all chapters are written by scientists at the international top of their respective fields, all are accessible to a non-specialist audience and eminently readable. We believe that they represent a state-of-the art overview of questions that are of interest to a large audience. The book thus targets a non-specialist audience with an interest in philosophical, sociological, scientific and legal issues involved in both traditional and recent matters concerning the desire of mankind to improve itself, the human body, the human mind and the human condition. It is unique in that it brings together all these aspects within a coherent and cohesive collection.
