"Something really bad happened here." So begins Army interrogator Tony Lagouranis's first briefing at Abu Ghraib. While Lagouranis's training stressed the rules of the Geneva Conventions, once in Iraq, he discovered that pushing the legal limits of interrogation was encouraged. Under orders, he-along with numerous other soldiers-abused and terrorized Iraqis by adding "enhancements" like dogs, hypothermia, and other techniques to "Fear Up Harsh"-the official tactic designed to frighten prisoners into revealing information. And he saw others do far worse. The first Army interrogator to publicly step forward and break the silence surrounding these tactics, Lagouranis reveals what went on in Iraqi prisons- raising crucial questions about American conduct abroad.

This book highlights the important need for more efficient and environmentally sound combustion technologies that utilise renewable fuels to be continuously developed and adopted. The central theme here is two-fold: internal combustion engines and fuel solutions for combustion systems. Internal combustion engines remain as the main propulsion system used for ground transportation, and the number of successful developments achieved in recent years is as varied as the new design concepts introduced. It is therefore timely that key advances in engine technologies are organised appropriately so that the fundamental processes, applications, insights and identification of future development can be consolidated. In the future and across the developed and emerging markets of the world, the range of fuels used will significantly increase as biofuels, new fossil fuel feedstock and processing methods, as well as variations in fuel standards continue to influence all combustion technologies used now and in coming streams. This presents a challenge requiring better understanding of how the fuel mix influences the combustion processes in various systems. The book allows extremes of the theme to be covered in a simple yet progressive way.

STALINGRAD...an eyewitness report of World War II's most decisive battle. Drafted into the German infantry when he was scarcely out of school, Benno Zieser fought his way deep into Soviet Russia—advancing, retreating, digging in, destroying tanks with hand grenades, battling snipers, killing the enemy in hand-to-hand combat. Outnumbered and outmaneuvered, he and his platoon struggled on, till their bravery was no longer an act of patriotism but a desperate effort to survive. Few of them did. At Stalingrad, the Wehrmacht soldiers reached the end of the line: nothing could spring the giant trap set by Russian crack troops closing in on them. Zieser's account of the war's most brutal battle is intensely moving and honest—a personal ordeal with a universal meaning. On the last day of January, 1943, the German Sixth Army surrendered to the Russians at Stalingrad. After a winter campaign of unparalleled horror and hardship, the Wehrmacht was beaten. THE ROAD TO STALINGRAD is a shattering eyewitness account of that lost battle—written by a survivor. Benno Zieser was drafted at the age of nineteen and fought in the infantry at Stalingrad. In this book he tells of his first naive enthusiasm—then the shocking realities: The frozen wastes of an unconquerable continent...guttered roads strewn with abandoned equipment...the anonymous graves by the wayside...the colossal fraud behind Hitler's promise of victory. Not since ALL QUIET ON THE WESTERN FRONT has a German author written such a powerful indictment of war—but Benno Zieser's book is fact, not fiction.
