Depression is a
widespread condition
affecting approximately
7.5 million parents in the
U.S. each year and may

be putting at least 15 million children at risk for adverse health outcomes. Based on evidentiary studies, major depression in either parent can interfere with parenting quality and increase the risk of children developing mental, behavioral and social problems.

Depression in Parents,
Parenting, and Children

Read Free Kitchenaid

highlights disparities in the prevalence, identification, treatment, and prevention of parental depression among different sociodemographic populations. It also outlines strategies for effective intervention and identifies the need for a more interdisciplinary approach that takes biological, psychological,

behavioral, interpersonal, and social contexts into consideration. A major challenge to the effective management of parental depression is developing a treatment and prevention strategy that can be introduced within a two-generation framework, conducive for parents and their children. Thus far, both the federal and state

response to the problem has been fragmented, poorly funded, and lacking proper oversight.

This study examines options for widespread implementation of best practices as well as strategies that can be effective in diverse service settings for diverse populations of children and their families. The delivery of adequate

detection and treatment
of a depressive illness and
prevention of its effects
on parenting and the
health of children is a
formidable challenge to
modern health care
systems. This study offers
