Contemporary old age is fraught with contradiction and complexity—women portrayed either as incompetent and cuddly grandmothers or as young women trapped in old bodies, images that rarely reflect how women actually see themselves. Women in Late Life explores the thorny issues related to gender and aging, including prevailing but problematic cultural expectations, body image, ageism, the experience of chronic illness, threats to Social Security and the very possibility of a secure retirement while challenging a long-term care system that disadvantages women. Author Martha Holstein writes from a critical feminist perspective, drawing on her many years of experience in gerontology, as well as interviews and personal experience as a woman now in her seventies. The book highlights how women's experience of late life is shaped by the effects of lifelong gender norms, by contemporary culture—from gender stereotypes to ageism—and by the political context. The book blends critique with proposals aimed at resisting damaging inequities resulting from being simultaneously old and a woman. She focuses on changes needed on multiple levels—societal, cultural, political, and individual. This interdisciplinary look at key questions around gender and aging is nuanced and beautifully written.

The editors of this volume have honored me by their invitation to write its Fore word, an invitation extended because of my editing a book on the maternal behavior of mammals in 1963. Much as I would like to think that I had opened a new area of study—and so played some part in the appearance of this fine new collection of chapters—the facts are quite otherwise. That in 1963 I could assemble the efforts of many distinguished investigators shows that the topic had already engaged their attention, and had for some years past. But even then, the topic had origins extending much farther into the past, to mention only Wiesner and Sheard's book Maternal Behavior in the Rat of 1933. Nevertheless, in 1963 it seemed to me that the study of maternal care in mammals had lagged behind the study of other kinds of social behavior. The present volume does much to establish parental care of the young as a topic central to an understanding of the relation between ontogeny and phylogeny, to the development of the young, to the social organization of the species, and to its preservation. It may now be seen not only as interesting but as a most significant pattern of behavior among mammals.
