Australia has a rich diversity of phasmids--otherwise known as stick and leaf insects. Most of them are endemic, few have been studied and new species continue to be found. Stick insects are, by far, Australia's longest insects--some of them reach up to 300 mm in body length and more than 500 mm including outstretched legs. Many stick insects are very colorful and some have quite elaborate, defensive behavior. Increasingly they are being kept as pets. This is the first book on Australian phasmids for nearly 200 years. It includes photographs and distribution maps for all species, notes on their ecology and biology as well as identification keys suitable for novices or professionals.

PhotoWork is a collection of interviews by forty photographers about their approach to making photographs and, more importantly, a sustained body of work. Curator and lecturer Sasha Wolf was inspired to seek out and assemble responses to these questions after hearing from countless young photographers about how they often feel adrift in their own practice, wondering if they are doing it the "right" way. The

responses, from both established and newly emerging photographers, reveal there is no single path.
