In geometry two triangles are similar if and only if corresponding angles are congruent and the lengths of corresponding sides are proportional. Let us look at some examples to understand how to find the lengths of missing sides in similar triangles. Example 1 : Find the measures of the missing sides if $\triangle KLM \sim \triangle NOP$. $k = 9$, $n = 6$, $o = 8$, $p = 4$.

designing designing is one of the most extraordinary books on design ever written. First published in 1984 and reprinted with this title and cover in 1991, the book was the product of ten years of auto-critique, reflection and experimentation on writing on designing. Offering a savage auto-critique of his own work on 'methods', as well as of the wider methods and ends of advanced industrial societies as a whole, this book challenges the traditional product- and progress- orientated focus on design by insisting that the world now coming into being requires designing to be understood as 'a response to the whole of life.' But designing designing is also unique in modern design thinking in its exploration of what writing on designing might be. Combining essays, interviews, reflections, performances, plays, poems, chance procedures, photographs, collages and quotes, Jones experiments with both form and content in an attempt to make a book which 'is not simply about designing but is instead itself an instance of the ideas and processes explored within it.'

A groundbreaking introduction to vectors, matrices, and least squares for engineering applications, offering a wealth of practical examples.
