Using real-world examples and modern theories to analyse actual markets, this book offers a practical perspective on microeconomic theory and how it is used to resolve problems and analyse policy issues.

The concept of Microeconomics revolves around the behaviour of market. The answers of questions such as, how prices are determined and what leads to change in the prices so determined provide the subject matter of microeconomics. This book is an effort to bring together all the related topics in a careful manner. The book provides an extensive approach towards the concepts of demand and supply, product pricing, elasticity of demand and supply, marginal utility, etc. The book is divided into twelve chapters. It has been developed keeping in view the requirements of graduate level students, as the book covers the syllabus of microeconomics, as prescribed for the BCom (Hons) 1 year course of the University of Delhi. The book is written with the objective to supplement the classroom teaching. It has been written in a manner as if lectures are being delivered. Given at the end of each chapter are the University examination questions, with solutions to the numerical questions at the end of the book. The book would prove to be equally useful for all microeconomics courses at the graduation level across all the universities in India.

Intended primarily for Managerial Economics courses, this text also provides practical content to current and aspiring industry professionals. Economics is a powerful tool that can help managers to manage effectively. In Managerial Economics Jeffrey Perloff and James Brander use real-world issues and examples from actual markets to show future managers how economic principles can be used in business decisions. In text examples and boxed mini-cases use actual data to illustrate how to use basic models. For example, to illustrate rivalry in oligopolistic markets, the authors look at rivalry between United and American Airlines and between Coke and Pepsi. Mini-case examples include why American Apparel is vertically integrated and why upscale manufacturers limit the number of designer hand-bags a customer is allowed to buy. To help future managers learn to solve new problems, Perloff and Brander repeatedly demonstrate problem-solving through in-text Q&As. Each Q&A poses an important managerial or economic issue and demonstrates how to solve it using a step-by-step approach.
