Corruption... How can policymakers and practitioners better comprehend the many forms and shapes that this socialpandemic takes? From the delivery of essential drugs, the reduction in teacher absenteeism, the containment of illegal logging, the construction of roads, the provision of water andelectricity, the international trade in oil and gas, the conduct of public budgeting and procurement, and the management of public revenues, corruption shows its many faces. 'The Many Faces of Corruption' attempts to bring greater clarity to the often murky manifestations of this virulent and debilitating social

disease. It explores the use of prototype road maps to identify corruption vulnerabilities, suggests corresponding 'warning signals,' and proposes operationally useful remedial measures in each of several selected sectors and for a selected sample of cross cutting public sector functions that are particularly prone to corruption and that are critical to sector performance. Numerous technical experts have come together in this effort to develop an operationally useful approach to diagnosing and tackling corruption. 'The Many Faces of Corruption' is an invaluable reference for policymakers, practitioners, and researchers engaged in the business of development.

The Halden Man-Machine Laboratory (HAMMLAB) has been at the heart of human factors research at the OECD Halden Reactor Project (HRP). The HRP is sponsored by a group of national organizations, representing nuclear power plant regulators, utilities, and research institutions. The HRP is hosted by the Institute for Energy Technology (IFE) in Halden, Norway. HAMMLAB comprises three full-scale nuclear power plant control room research simulators. The simulator studies performed in HAMMLAB have traditionally been experimental in nature. In a

# Online Library Opcom User Manual Free

simulator it is possible to study events as they unfold in real time, in a highly realistic operational environment under partially controlled conditions. This means that a wide range of human factors issues, which would be impossible or highly impracticable to study in real-life settings, can thus be addressed in HAMMLAB. Simulator-based Human Factors Studies Across 25 Years celebrates the twenty-fifth anniversary of HAMMLAB by reviewing the human factors studies performed in HAMMLAB across this time-span. A range of human factors issues have been addressed, including: □ human-system interfaces; □ alarm systems; □ computerized procedures; □ human-automation interaction; □ staffing, teamwork and

human reliability. The aim of HAMMLAB studies has always been the same: to generate knowledge for solving current and future challenges in nuclear power plant operation to contribute to safety. The outcomes of HAMMLAB studies have been used to support design and assessment of nuclear power plant control rooms.

For more than 20 years, Network World has been the premier provider of information, intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations.

Readers are responsible for designing, implementing and managing the voice, data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce.

How does it come about that a certain firm dominates a market? Can an understanding of this process lead to a more effective enforcement of competition law? That is the question approached in this compelling book. The author reviews the European Union's (EU's) Article 102 case law, comparing it with United States

(US) provisions, demonstrating that new ways of looking at market power are needed – today’s tech giants differ from older monopolies. He clarifies the role of dominant firms in the competitive process, proposing that conduct should be scrutinized differently depending on the source of market power, rather than using the same approach for all dominant undertakings. Supporting his contention that the legal consequences that derive from holding a dominant position cannot be disassociated from the sources of that market power—that a dynamic understanding of dominance requires looking both forwards and backwards in time—the author examines such sources of dominance as the following: – statutory

# Online Library Opcom User Manual Free

dominance derived from explicit protectionist measures or subtler geoeconomic strategies; – legacy firms such as the telecommunications or transport industries; – natural monopolies, e.g., the exploitation of a mine; – investment efforts undertaken in a competitive environment; – intangible resources such as timing, reputation, experience, innovation capabilities, or managerial processes; – lucky monopolies; and – anticompetitive behavior on the road to dominance. Drawing insights from EU and US case law, industrial organization scholarship, and strategic management literature, the book resolves questions related to the role that the origins of market power have played and should play in the

enforcement of EU competition rules against dominant firms. It concludes with a list of policy recommendations bringing the application of Article 102 TFEU against dominant firms more in line with the objective of protecting the competitive process. With its focus on how EU competition law enforcement should be fine-tuned to adequately incorporate the origins of firm dominance into the analysis of single-firm behavior, the book makes a major contribution to the analysis of anticompetitive effects. Practitioners, competition authorities, and academics in competition law will greatly appreciate the book's combination of legal analysis and recommendations for policy reform.
