Through his innovative study of language, noted Heidegger scholar Lawrence Hatab offers a proto-phenomenological account of the lived world, the “first” world of factual life, where pre-reflective, immediate disclosiveness precedes and makes possible representational models of language. Common distinctions between mind and world, fact and value, cognition and affect miss the meaning-laden dimension of embodied, practical existence, where language and life are a matter of “dwelling in speech.” In this

second volume, Hatab supplements and fortifies his initial analysis by offering a detailed treatment of child development and language acquisition, which exhibit a proto-phenomenological world in the making. He then takes up an in-depth study of the differences between oral and written language (particularly in the ancient Greek world) and how the history of alphabetic literacy shows why Western philosophy came to emphasize objective, representational models of cognition and language, which conceal and pass over the presentational domain of dwelling in speech. Such a study offers significant new angles on the nature of philosophy and

Chronological range and stylistic variety of ekphrastic poetry, or poetry that engages in various ways with different types of visual art, including pictographs, paintings, moving panoramas, daguerreotypes, photographs, landscape, and more. The volume shows how ekphrasis has been a part of American poetry from its inception, and that as many American men as women have produced work in this genre. The book opens with an overview chapter followed by an examination of American ekphrastic poems during the formative Colonial period where Europe, Africa, and Indigenous America met in encounters that are depicted in art and literature. It closes with two chapters on

Native American poetry that consider how American landscapes serve as ekphrastic prompts for personal and collective experiences. In between are contributions on men and women poets and artists who have engaged with ekphrasis in a variety of ways from different periods. As such, American ekphrasis emerges as a genre that has implications far beyond the Eurocentric versions of the canon that have hitherto been discussed in the critical literature on the topic.

Compared to the conventional Rankine cycle using water, the ORC can create efficient expansion at low power, avoid superheater and offer higher thermal efficiency in low temperature application. Small-scale ORCs from several kWe to a few hundred kWe offer great potential for meeting the residential demand on heat and power, and are of growing interest in scientific and technical fields. However, one critical problem is the decreased device efficiency and cost-effectiveness that arises when the ORC is scaled down. In this thesis, the ORC is combined with low concentration-ratio solar

collectors. The background, research trend, merits and importance of the solar ORC are described. To reduce the thermodynamic irreversibility and the cost of the system, three innovative solutions are proposed: solar ORC without heat transfer fluid (HTF), which employs two-stage collectors and heat storage units; hybrid solar power generation based on ORC and amorphous silicon cells; osmosis-driven solar ORC. Heat collection, storage and power conversion are optimized. The design, construction and test of a prototype are conducted, demonstrating the feasibility of the ORC for small-scale cogeneration. Special attention is paid to the variable operation and

Extraction processes are essential steps in numerous industrial applications from perfume over pharmaceutical to fine chemical industry. Nowadays, there are three key aspects in industrial extraction processes: economy and quality, as well as environmental considerations. This book presents a complete picture of current knowledge on green extraction in terms of innovative processes, original methods, alternative solvents and safe products, and provides the necessary theoretical background as well as industrial application examples and environmental impacts. Each chapter is written

by experts in the field and the strong focus on green chemistry throughout the book makes this book a unique reference source. This book is intended to be a first step towards a future cooperation in a new extraction of natural products, built to improve both fundamental and green parameters of the techniques and to increase the amount of extracts obtained from renewable resources with a minimum consumption of energy and solvents, and the maximum safety for operators and the environment.

As Africa's strategic importance has increased over the past decade and a half, United States security cooperation with the

continent has expanded. The most visible dimension of this increased engagement was the establishment of the U.S. Military Command for Africa (AFRICOM). Some critics are skeptical of AFRICOM's purpose and see the militarization of U.S. Africa policy while others question its effectiveness. Recognizing the link between development and security, AFRICOM represents a departure from the traditional organization of military commands because of its holistic approach and the involvement of the Department of State as well as other U.S. government stakeholders. Nevertheless, AFRICOM's effort to combine security and development faces formidable conceptual and

operational challenges in trying to ensure both American and African security interests. The human security perspective's emphasis on issues that go beyond traditional state-centered security to include protecting individuals from threats of hunger, disease, crime, environmental degradation, and political repression as well as focusing on social and economic justice is an important component of security policy. At the same time, the threat of violent extremism heavily influences U.S. security cooperation with Africa. In this examination of the context of U.S.-African security relations, Robert J. Griffiths outlines the nature of the African state, traces the contours of African conflict,

surveys the post-independence history of U.S. involvement on the continent, and discusses policy organization and implementation and the impact of U.S. experiences in Iraq and Afghanistan on the U.S.-Africa security relationship. Africa's continuing geostrategic significance, the influence of China and other emerging markets in the region, and America's other global engagements, especially in light of U.S. fiscal realities, demonstrate the complexity of U.S.-African security cooperation.

Mitigation has resulted in a variety of new practices, rules and ways of doing things: a period of active construction of low carbon economies. From outer space observations of the carbon in tropical forests, to carbon financial reporting, and insulating solid masonry walls, these diverse things, activities and objects are integral to how climate change has been brought into being as a problem. The book takes a fresh look at society's response to climate change by examining a diverse array of empirical sites where climate change is being made real through its incorporation into everyday lives – a process of stitching climate concerns into the discourse and practices of

already existing economies, as well as creating new economies. The Making of Low Carbon Economies adds fresh insights to economic sociology and science and technology studies scholarship on the multiple origins and heterogeneous operation of markets, demonstrating the constraints and opportunities of an economic framing of the problem of climate change. It covers the obvious (and now well-researched) topic of carbon markets, as well as new more unusual material on the low carbon reframing of already existing markets and economies.
