At this time Citect for Windows had the dominant market share (in Australia) of PC based operator interface software but new competitor software was catching up to the features and functionality of Citect and gaining in popularity. Citect began to focus more on remaining competitive; version 5 was released containing mainly features aimed at keeping the software at the leading edge of the ...

This textbook covers digital design, fundamentals of computer architecture, and assembly language. The book starts by introducing basic number systems, character coding, basic knowledge in digital design, and components of a computer. The book goes on to discuss information representation in computing; Boolean algebra and logic gates; sequential logic; input/output; and CPU performance. The author also covers ARM architecture, ARM instructions and ARM assembly language which is used in a variety of devices such as cell phones, digital TV, automobiles, routers, and switches. The book contains a set of laboratory experiments related to digital design using Logisim software; in addition, each chapter features objectives, summaries, key terms, review questions and problems. The book is targeted to students majoring Computer Science, Information System and IT and follows the ACM/IEEE 2013 guidelines. • Comprehensive textbook covering digital design, computer architecture, and ARM architecture and assembly • Covers basic number system and coding, basic knowledge in digital design, and components of a computer • Features laboratory exercises in addition to objectives, summaries, key terms, review questions, and problems in each chapter

"You can be lonely anywhere, but there is a particular flavor to the loneliness that comes from living in a city, surrounded by thousands of strangers. The Lonely City is a roving cultural history of urban loneliness, centered on the ultimate city: Manhattan, that teeming island of gneiss, concrete, and glass. What does it mean to be lonely? How do we live, if we're not intimately involved with another human being? How do we connect with other people, particularly if our sexuality or physical body is considered deviant or damaged? Does technology draw us closer together or trap us behind screens? Olivia Laing explores these questions by travelling deep into the work and lives of some of the century's most original artists, among them Andy Warhol, David Wojnarowicz, Edward Hopper, Henry Darger and Klaus Nomi. Part memoir, part biography, part dazzling work of cultural criticism, The Lonely City is not just a map, but a celebration of the state of loneliness. It's a voyage out to a strange and sometimes lovely island, adrift from the larger continent of human experience, but visited by many - millions, say - of souls"--

AT THE time of my parting with the Rishi, after seven years of study under him, and when I thought I knew it all, he, placing his hand on my shoulder said: 'Go forth, my son, into nature's schoolhouse and learn, for at present you know nothing except how to learn. Every old rock with its wrinkled and gnarled fact is speaking a tale of the past if you will but listen, every leaf on tree or bush and every flower and blade of grass growing out of the ground, has a whisper for listening ears. Nature is the great schoolhouse of knowledge, from which man is taught. Nature is God speaking.' In my previous books I endeavored to show the high state attained by the Earth's First Civilization, the state they had arrived at after 200,000 years of study and experience: and, how man then learnt his lessons from nature, a study which brought him into a closer touch with his Heavenly Father. I showed that his sciences were mere copies of nature. Even his geometry and geometrical figures were taken from flowers. He carried these flower symbols into his art so that, today, we find his ancient statuary and structures based on regular, progressive, geometrical lines. The same geometrical figures were used in explaining and teaching religion. In this work I have tried to show the ancient sciences in their grander and more sublime form, taking a step nearer to the Creator himself. Yet told in childlike simplicity, as was the custom of the ancients, unencumbered with technology and hard words to understand.—James Churchward

This book constitutes the thoroughly refereed conference proceedings of the Fourth International Workshop on Risk Assessment and Risk-Driven Quality Assurance, RISK 2016, held in conjunction with ICTSS 2016, in Graz, Austria, in October 2016. The revised 9 full papers were carefully reviewed and selected from 11 submissions. They focus on research studying, developing and evaluating innovative techniques, tools, languages and methods risk assessment and risk-driven quality engineering. The papers are organized topical sections: security risk management; security risk analysis; risk-based testing.

What do you do when your carefully planned life takes a wrong turn into hell? When Quinn Maguire, a dashing young trauma surgeon, unaccountably accepts a position as an ER physician, her new boss, Honor Blake, suspects that Quinn is hiding a dark secret. While the two declare an uneasy truce in an effort to work together, both struggle with mutual, and unexpected, attraction. Honor, however, has more than one reason to resist her growing feelings for the attractive newcomer—not the least of which is that her heart belongs to the woman whose wedding ring she wears. Amidst the chaos and drama of a busy emergency room, Quinn and Honor must contend not only with the fragile nature of life, but also with the mysteries of the heart and the irresistible forces of fate.

This book presents a comprehensive description of the configuration of devices and network for the S7-400 components inside the engineering framework TIA Portal. You learn how to formulate and test a control program with the programming languages LAD, FBD, STL, and SCL. The book is rounded off by configuring the distributed I/O with PROFIBUS DP and PROFINET IO using SIMATIC S7-400 and data exchange via Industrial Ethernet. SIMATIC is the globally established automation system for implementing industrial controllers for machines, production plants and processes. SIMATIC S7-400 is the most powerful automation system within SIMATIC. This process controller is ideal for data-intensive tasks that are especially typical for the process industry. With superb communication capability and integrated interfaces it is optimized for larger tasks such as the coordination of entire systems. Open-loop and closed-loop control tasks are formulated with the STEP 7 Professional V11 engineering software in the field-proven programming languages Ladder Diagram (LAD), Function Block Diagram (FBD), Statement List (STL), and Structured Control Language (SCL). The TIA Portal user interface is

tuned to intuitive operation and encompasses all the requirements of automation within its range of functions: from configuring the controller, through programming in the different languages, all the way to the program test. Users of STEP 7 Professional V12 will easily get along with the descriptions based on the V11. With start of V12, the screens of the technology functions might differ slightly from the V11.
