The coastal and archipelago areas in the Baltic Sea are popular destinations for a number of tourists. An important group of tourists is boaters, who visit the coastal areas during a short summer period. Boat owners are sometimes pictured as having a great interest for the nature and a willingness to do right. Pollution from pleasure boats such as discharges of oil and fuel, antifouling paints and cleaning agents have a negative impact on the coastal environment. Environmentally sound alternatives exist to some extent, but are not very common. Sustainable alternatives for boaters are lacking behind. One of the underlying purposes of this study was to understand how we can help boat owners change their behaviour and decrease the negative impact on the marine environment. The survey among boaters has been conducted in Finland, Sweden and Denmark with a web based survey ordered by the Keep Sweden Tidy Foundation together with Keep the Archipelago Tidy Association in Finland and the Danish Outdoor Council. The research was performed by SIFO Research International.

About the ARM Architecture The ARM architecture is the industry's leading 16/32-bit embedded RISC processor solution. ARM Powered microprocessors are being routinely designed into a wider range of products than any other 32-bit processor. This wide applicability is made possible by the ARM architecture, resulting in optimal system solutions at the crossroads of high performance, low power consumption and low cost. About the book This is the authoritative reference guide to the ARM RISC architecture. Produced by the architects that are actively working on the ARM specification, the book contains detailed information about all versions of the ARM and Thumb instruction sets, the memory management and cache functions, as well as optimized code examples. 0201737191B05092001

International media assistance is a small but important form of international democracy-promotion aid. Media assistance boomed after the 1989 transitions in Central Europe, but now flows to virtually all regions of the world. Today the media assistance industry is focused on the problem of sustainability: How are free and independent public affairs media supposed to maintain their editorial mission while facing hostile political systems or the demands of the consumer marketplace? Many media in developing countries have been or are grant-dependent. When grants are exhausted or withdrawn, media that were funded to further democratic consolidation typically wither and die. Some become mere grant chasers. Others abandon public service to the demands of market competition, or political patronage. As a result, governmental and non-governmental grant makers now emphasize the need for sustainability in considering grants in the media sector. Many grant recipients have grown frustrated, sometimes bitter, and have sought to take a much more active role in the way assistance programs are put together. Just how is sustainability to be achieved while also ensuring a public-service editorial mission? Exporting Press Freedom examines the history and practice of media assistance, and argues that the dilemma of media independence and sustainability is best understood as an economic problem rather than one of poor editorial standards or lack of will. It includes profiles of news and public

affairs media in developing and democratizing countries, and also of two non-governmental organizations that have pioneered the use of low-interest loans in media assistance. These profiles exemplify strategic and entrepreneurial approaches to developing and supporting public service media. Such approaches may be of use not only in the developing world, but in the consolidated Western democracies as well, where concern has grown about poor journalistic performance and its consequences for democratic governance.

“ The best explanation that I have seen of corrosion on boats. ” —Nigel Calder, author of Boatowner ’ s Mechanical and Electrical Manual
“ A powerful weapon in the war against metal deterioration. ” —Cruising World Corrosion is a constant, often expensive, and sometimes dangerous problem for boaters. Moisture, salt, electrical currents, and chemicals create a potent combination that can attack the metallic (and sometimes nonmetallic) parts of your boat. Everett Collier, an expert in marine technology, details all the types of corrosion—including simple galvanic, electrochemical, and electrolytic—and explains how to identify, combat, and prevent them. The most comprehensive book on this subject, The Boatowner's Guide to Corrosion shows you how to: Prevent corrosion with proper grounding, cathodic protection, protective coatings, and careful selection and matching of metal parts Protect your boat ’ s hull, deck gear, masts, and rigging, as well as its propulsion, electrical, plumbing, and steering systems Recognize and cure developing corrosion before it can damage your boat
